

J-W Power Company Celebrates 20 Years of CNG

J-W Power Company, a wholly-owned subsidiary of J-W Energy Company, built its first compressor package designed specifically for a Compressed Natural Gas application twenty years ago. Manufactured at J-W Power Company's facility in Longview, Texas; the first CNG packages were delivered in January 1994 to customers in Liberal and Hugoton, Kansas, followed by Sonora, Texas and Saint John, British Columbia. The company has manufactured over 50,000 horsepower of CNG compression since that time.

Providing natural gas compression equipment, storage systems, and energy solutions worldwide since 1966, J-W Power Company currently operates the largest privately-owned compression leasing fleet in the United States. For over five decades J-W Power Company has built a solid reputation for manufacturing effective, durable, and reliable compression equipment, proven to run unattended in even the harshest conditions.

"J-W Power Company is very proud that we have been involved with CNG for 20 years." stated Don Bizzell, "We engineered some of the first CNG packages and from this length of time and dedication has come experience that is immeasurable to new customers entering the business."

The company's experience having built over 4,000 oilfield compressor packages naturally led to being an authority in the highly-engineered equipment design used in compressed natural gas (CNG) applications. J-W Power Company CNG Refueling Equipment packages are available for sale, with or without maintenance. In addition, the company provides our customers with start-up, commissioning, station equipment installation assistance and contract maintenance services. Customer satisfaction, safety and a culture of commitment come first for J-W Power Company.

J-W Power Company is a wholly-owned subsidiary of J-W Energy Company that specializes in leasing, sales and service of natural gas compression packages. J-W Power Company leases and operates the largest privately-owned compression fleet in the United States with compressor packages ranging from 18 to 1,775 horsepower.
